

CALIFORNIA STATE UNIVERSITY

California State University selected WerkMaster machines and tooling systems as being the best solution for this demanding project.

Harnessing the power of your staff WerkMaster Systems save time and money

"After considerable market research, we chose to partner with WerkMaster for the ongoing grinding and polishing projects at our facilities...for the following reasons:

Firstly, the WerkMaster systems and solutions are able to deliver the lowest refinishing costs per sq. ft. when compared against the other manufacturers we considered.

Secondly, the simplicity of the WerkMaster system. WerkMaster were able to provide us with a dialed-in approach that was specific for our needs. It really works. We are delighted with the quality of product delivered, and the clarity of shine that's produced.

Thirdly, their ongoing support. On the occasions that we've needed some additional advice, they have always been ready with knowledgeable and easy to follow guidance. We also really appreciate the regular contact that they have with us, just to check-in and make sure that everything is OK.

In our experience, we have found that the team at WerkMaster provides an end-to-end solution that is perfect for our needs and their ongoing support has been unparalleled."

Lester Granados
Operations Manager

Challenge

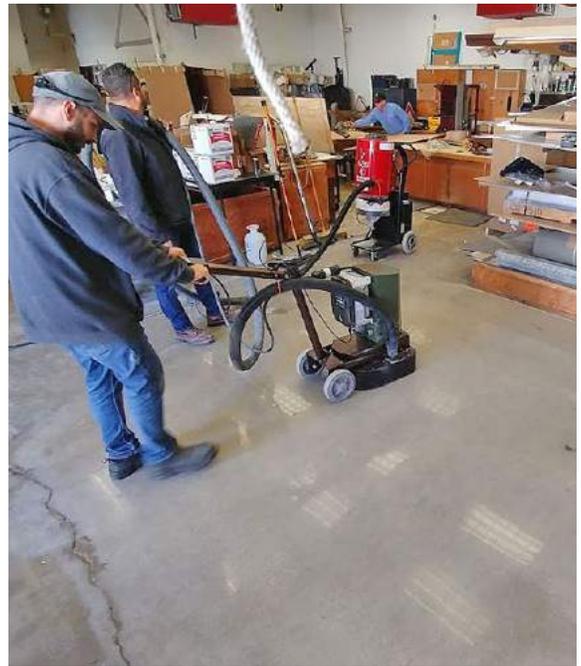

- Multiple floor coatings
- Hard concrete
- Uneven floor
- Confined grinding spaces

Equipment

- WerkMaster Titan XT - Electric
- WerkMaster Cobra XT - Electric
- WerkMaster White Bond TearDrop Tooling 16, 30/40, 70/80 Grit
- WerkMaster Achromic Tooling 100 Grit
- WerkMaster Pro-Resin 200 - 1500 Grit
- WerkMaster ULTRAdensifill Densifier
- WerkMaster ULTRAGuard Sealer
- Ermator S36 Vacuum

Getting into tight spaces with ease. WerkMaster are very maneuverable machines that eliminate the need to hand grind around drains and edges

Below: WerkMaster provides a complete end to end solution from machines and tooling to our Industry leading ULTRAguard concrete sealer.

Maintaining a facility that runs continuously can be challenging. Trying to hire a contractor to work around your schedule can be almost impossible. When California State University went looking for a complete end to end solution that, incorporated edging into the process, WerkMaster was the obvious solution.

After a conversation with WerkMaster and an onsite demonstration, California State University realized that because most, if not all, their manufacturing equipment was already in place, being able to edge would save them a tremendous amount of time and labour costs.

Knowing that they already possessed a team of highly trained and skilled workers, California State University were confident in their ability to polish their own facility.

A short time after the equipment arrived, WerkMaster arrived on site and put on a comprehensive 3 day polishing school. The results speak for themselves, WerkMaster was happy to provide a system that will both look great and offer low maintenance for many years to come.

The onsite training gave the team the skills and confidence to deliver this challenging project.
